Decided on conditional field rendering logic

Checked system logs

Investigated institution state

I notice there's no PATCH request in the recent logs for saving the institution. Let me check the current database state for this institution:

2 actions

The database shows the CRICOS Provider Code (03567C) and RTO Number (51971) are already saved for this institution. Could you clarify what you mean by "not updating"?

1. Are you typing new values and clicking Save, but the old values remain after refresh?

2. Are the input fields not responding when you type?

3. Or is there an error message when you try to save?

Also, when you try to update these fields, are you clicking the "Update" or "Save" button after making changes?
